Edgar Allan Poe, excerpt from A Few Words On Secret Writing, 1841 For as long as language and communication have existed, humans have been inventing ways to mask their messages from prying eyes. Military and diplomatic officials often devise secret codes to transmit sensitive data and confidential information to approved parties. This practice has become so commonplace in recent years that entire sciences, hobbies, and fully fledged professions have been established to decipher these cryptic texts, called cryptographers. Needless to say, these revolutionary methods of cryptography, though historic, are now considered archaic. Their simplistic secrets have been disclosed to the general public, and even incorporated into childrens toys geared towards aspiring spies. With the bulk of modern civilization so dependent on the virtual world, secret codes have evolved to a whole new level, most notably through data encryption. Data encryption, which aims to conceal classified electronic information through the use of complex ciphers and algorithms, was initially used for governmental and military purposes, but it now acts as the primary medium of security that most online platforms (as of January 2017, at least half of them) provide for their users. As intricate and inextricable as data encryption might seem to people today, a growing number of brilliant but devious minds continue to successfully find ways to bypass supposedly state-of-the-art encryption software, rendering the efforts of the enormous teams employed to handle online security void. As a matter of fact, stories...
