HYDROGEOLOGIC FRAMEWORK AND WATER QUALITY OF THE VERMONT ARMY NATIONAL GUARD ETHAN ALLEN FIRING RANGE, NORTHERN VERMONT, OCTOBER 2002 THROUGH DECEMBER 2003: USGS SCIENTIFIC INVESTIGATIONS REPORT 2005-5159

To get **Hydrogeologic Framework and Water Quality of the Vermont Army National Guard Ethan Allen Firing Range, Northern Vermont, October 2002 Through December 2003: Usgs Scientific Investigations Report 2005-5159** PDF, remember to follow the link listed below and save the document or have accessibility to other information which might be highly relevant to **HYDROGEOLOGIC FRAMEWORK AND WATER QUALITY OF THE VERMONT ARMY NATIONAL GUARD ETHAN ALLEN FIRING RANGE, NORTHERN VERMONT, OCTOBER 2002 THROUGH DECEMBER 2003: USGS SCIENTIFIC INVESTIGATIONS REPORT 2005-5159** book.

Bibliogov, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.The Ethan Allen Firing Range of the Vermont Army National Guard is a weapons-testing and training facility in a mountainous region of Vermont that has been in operation for about 80 years. The hydrologic framework and water quality of the facility were assessed between October 2002 and December 2003. As part of the study, streamflow was continuously measured in the Lee River and 24 observation wells were installed at 19 locations in the stratified drift and bedrock aquifers to examine the hydrogeology. Chemical analyses of surface water, ground water, streambed sediment, and fish tissue were collected to assess major ions, trace elements, nutrients, and volatile and semivolatile compounds. Sampling included 5 surface-water sites sampled during moderate and low-flow conditions; streambed-sediment samples collected at the 5 surface-water sites; fish-tissue samples collected at 3 of the 5 surface-water sites; macroinvertebrates collected at 4 of the 5 surface-water sites; and ground-water samples collected from 10 observation wells, and samples collected at all surface- and ground-water sites. The hydrogeologic framework at the Ethan Allen Firing Range is dominated by the upland mountain and valley setting of the site. Bedrock wells yield low to moderate amounts of water (0 to 23 liters per minute). In the narrow river valleys, layered stratified-drift deposits of sand and gravel of up to 18 meters thick fill the Lee River and Mill Brook Valleys. In these deposits, the water table is generally within 3 meters below the land surface and overall ground-water flow is from east to west. Streamflow in the Lee River averaged 0.72 cubic meters per second (25.4 cubic feet per second) between December 2002 and December 2003. Streams are highly responsive to precipitation events...
